

ALTERNATE FLOW SPECIFICATION

Use Case: UC-02 — Reserve Equipment Slot

Actor: Student

Alternate Flow: A1 — Equipment/Slot Unavailable

1. Trigger

The student selects an equipment and time slot that is already reserved.

2. Alternate Flow — A1

A1.1 The system detects that the selected equipment is already reserved for the requested time slot.

A1.2 The system prevents the student from creating the reservation for the unavailable slot.

A1.3 The system displays an “**Equipment/Slot Unavailable**” message.

A1.4 The system displays alternative available time slots.

A1.5 The student selects another available time slot.

A1.6 The system resumes the reservation process from the appropriate step of the main success scenario.

3. Postcondition

No conflicting reservation is created for the unavailable slot. If the student selects an alternative slot, the reservation process continues normally.

4. UML Relationship

This alternate flow is represented using an «**extend**» relationship:

Handle Unavailable Slot «extend» **Reserve Equipment Slot**
